

Conflict Forecast: Syria

Target Month: March 2026

Section 1

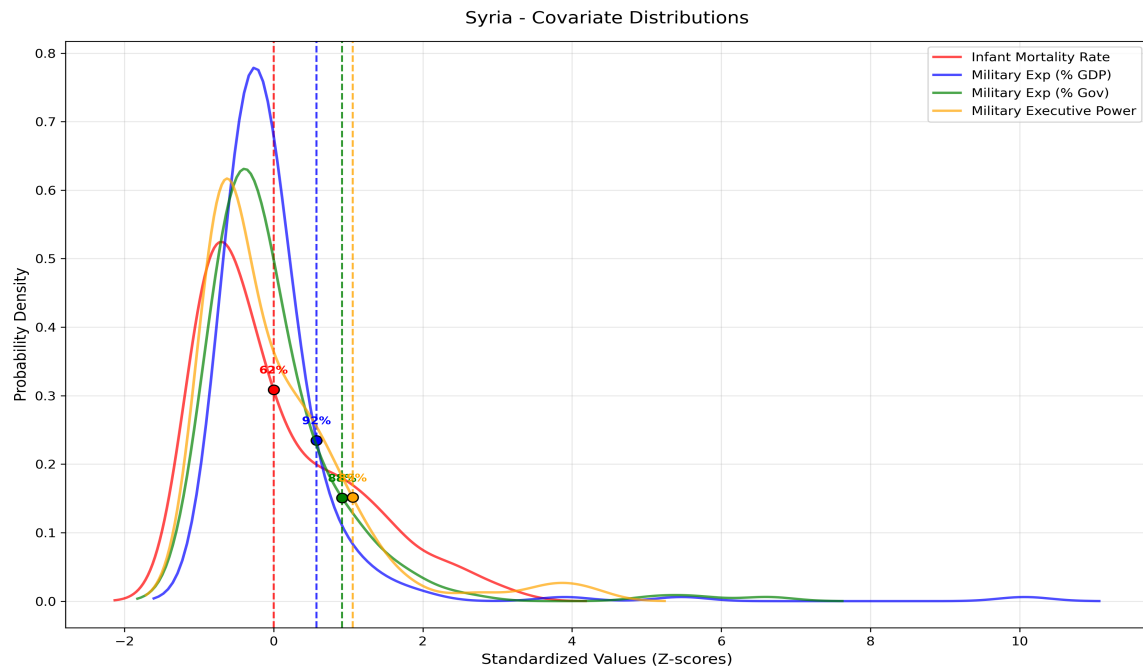

This figure shows the historical trend for March fatalities over the past 5 years, with our forecast for March 2026 highlighted. The other forecast months are shown for additional context. Global and cohort averages provide comparative context.

Our forecast for March 2026 (325 fatalities) is moderately lower than the 5-year historical average (458 fatalities).

Section 2

This figure shows where the target country sits within the global distribution for key covariates. Each colored curve represents the probability density of a covariate across all countries, with the target country's position marked by a vertical line.

Country profile: Infant Mortality Rate: high (62th percentile); Military Exp (% GDP): very high (92th percentile); Military Exp (% Gov): very high (88th percentile); Military Executive Power: very high (89th percentile).

Section 3

This figure shows the global distribution of conflict forecasts for March 2026, with countries positioned by their probability of experiencing ≥ 25 fatalities (x-axis) and predicted fatalities (y-axis, symlog scale). The target country is highlighted with a prominent marker.

For March 2026, Syria is forecasted with 1.000 probability of ≥ 25 fatalities (100th percentile) and 325.0 predicted fatalities (98th percentile). Risk category: Near-certain conflict; Intensity category: 101-1,000.
