

Conflict Forecast: Congo, DRC

Target Month: March 2026

Section 1

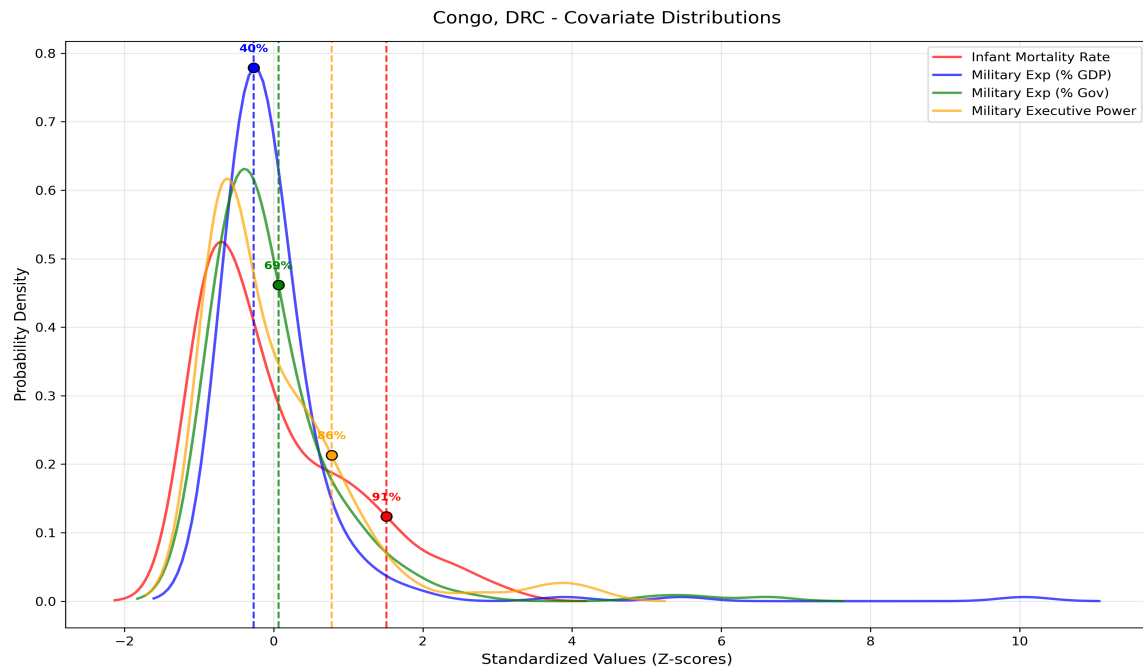

This figure shows the historical trend for March fatalities over the past 5 years, with our forecast for March 2026 highlighted. The other forecast months are shown for additional context. Global and cohort averages provide comparative context.

Our forecast for March 2026 (41 fatalities) is significantly lower than the 5-year historical average (462 fatalities).

Section 2

This figure shows where the target country sits within the global distribution for key covariates. Each colored curve represents the probability density of a covariate across all countries, with the target country's position marked by a vertical line.

Country profile: Infant Mortality Rate: very high (91th percentile); Military Exp (% GDP): moderate (40th percentile); Military Exp (% Gov): high (69th percentile); Military Executive Power: very high (86th percentile).

Section 3

This figure shows the global distribution of conflict forecasts for March 2026, with countries positioned by their probability of experiencing ≥ 25 fatalities (x-axis) and predicted fatalities (y-axis, symlog scale). The target country is highlighted with a prominent marker.

For March 2026, Congo, DRC is forecasted with 0.903 probability of ≥ 25 fatalities (93th percentile) and 41.6 predicted fatalities (93th percentile). Risk category: Probable conflict; Intensity category: 11-100.
