

Conflict Forecast: Cameroon

Target Month: March 2026

Section 1

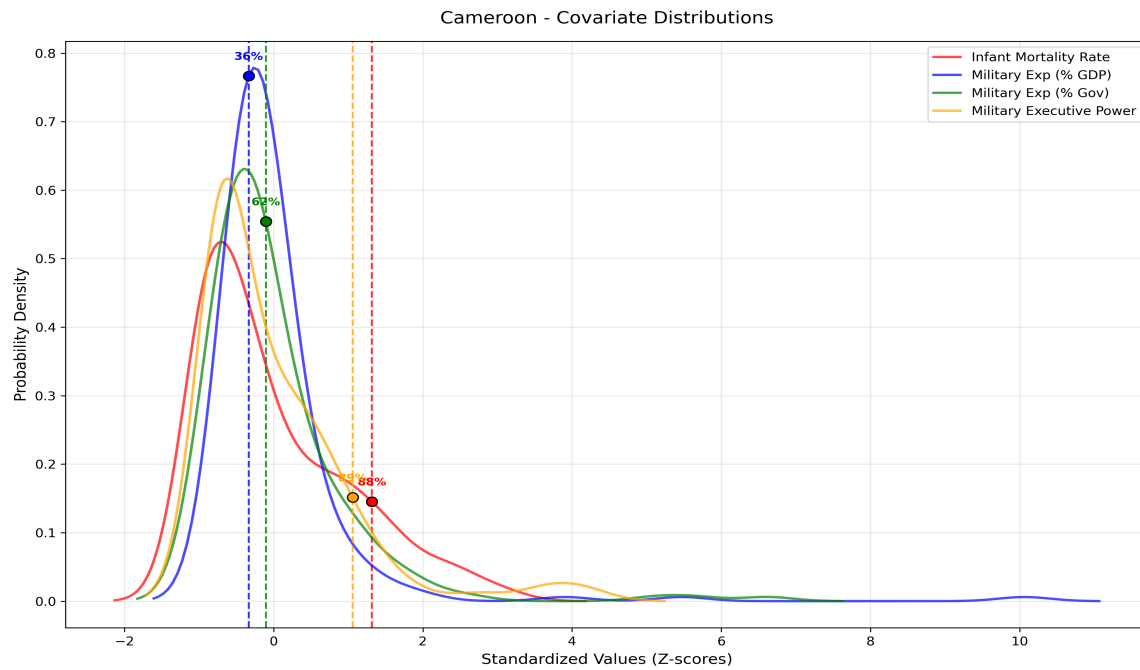

This figure shows the historical trend for March fatalities over the past 5 years, with our forecast for March 2026 highlighted. The other forecast months are shown for additional context. Global and cohort averages provide comparative context.

Our forecast for March 2026 (18 fatalities) is significantly lower than the 5-year historical average (44 fatalities).

Section 2

This figure shows where the target country sits within the global distribution for key covariates. Each colored curve represents the probability density of a covariate across all countries, with the target country's position marked by a vertical line.

Country profile: Infant Mortality Rate: very high (88th percentile); Military Exp (% GDP): low (36th percentile); Military Exp (% Gov): high (62th percentile); Military Executive Power: very high (89th percentile).

Section 3

This figure shows the global distribution of conflict forecasts for March 2026, with countries positioned by their probability of experiencing ≥ 25 fatalities (x-axis) and predicted fatalities (y-axis, symlog scale). The target country is highlighted with a prominent marker.

For March 2026, Cameroon is forecasted with 0.145 probability of ≥ 25 fatalities (90th percentile) and 18.6 predicted fatalities (90th percentile). Risk category: Improbable conflict; Intensity category: 11-100.
