

# Conflict Forecast: Somalia

Target Month: December 2025

## Section 1

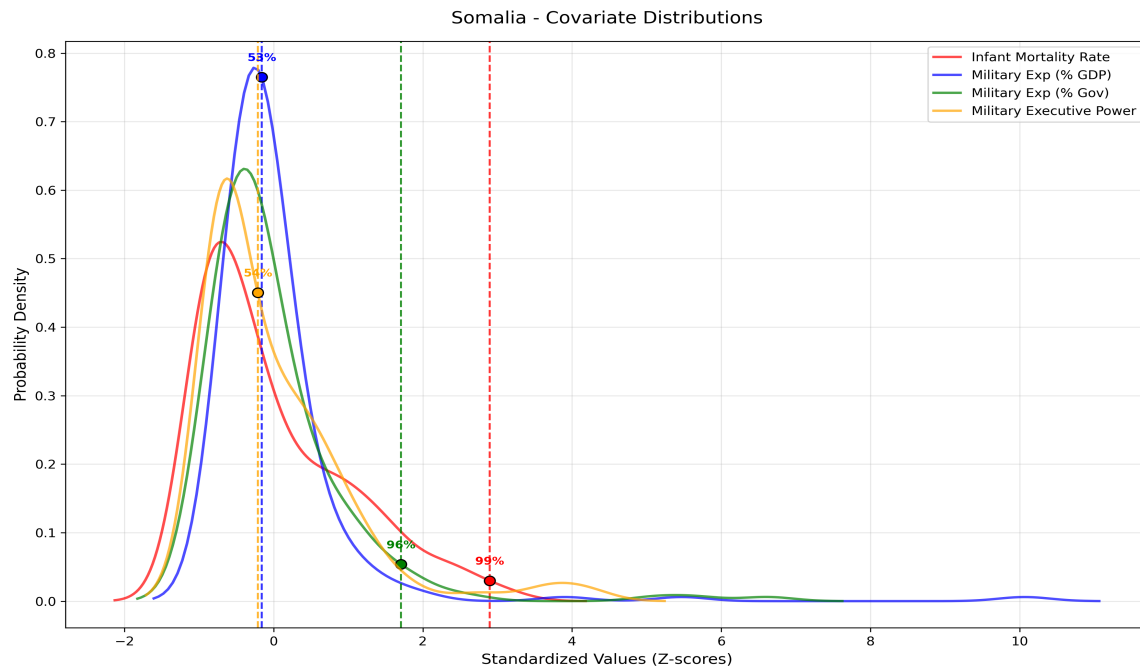

This figure shows the historical trend for December fatalities over the past 5 years, with our forecast for December 2025 highlighted. The other forecast months are shown for additional context. Global and cohort averages provide comparative context.

Our forecast for December 2025 (124 fatalities) is moderately lower than the 5-year historical average (171 fatalities).

## Section 2

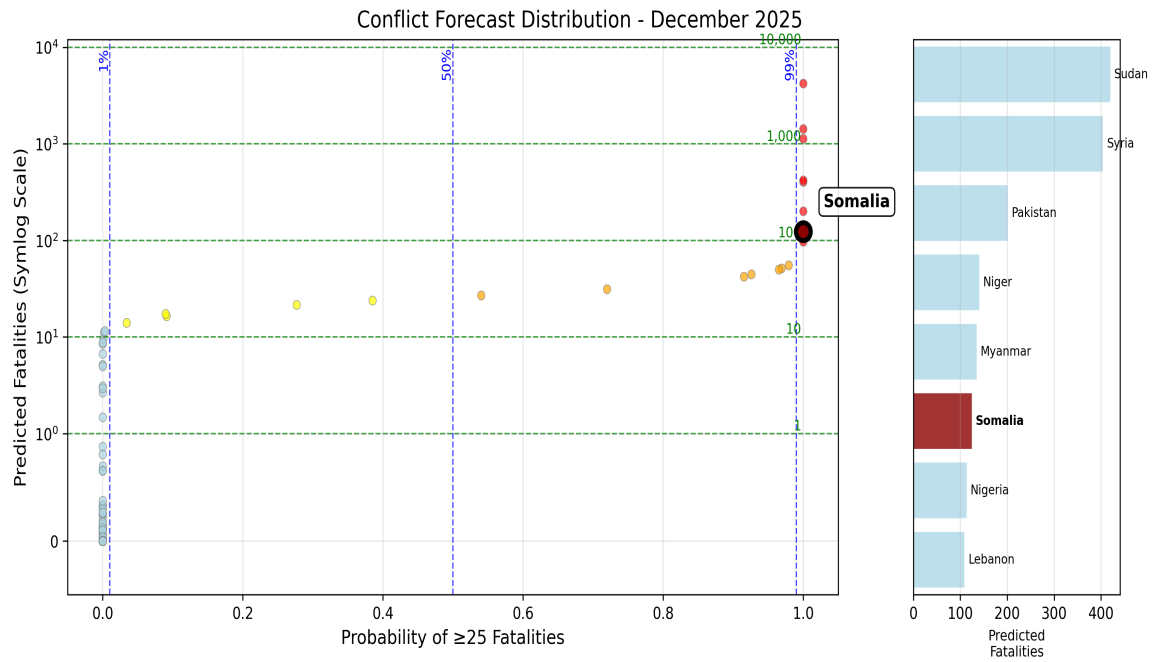

This figure shows where the target country sits within the global distribution for key covariates. Each colored curve represents the probability density of a covariate across all countries, with the target country's position marked by a vertical line.

Country profile: Infant Mortality Rate: very high (99th percentile); Military Exp (% GDP): moderate (53th percentile); Military Exp (% Gov): very high (96th percentile); Military Executive Power: moderate (54th percentile).

### Section 3

This figure shows the global distribution of conflict forecasts for December 2025, with countries positioned by their probability of experiencing  $\geq 25$  fatalities (x-axis) and predicted fatalities (y-axis, symlog scale). The target country is highlighted with a prominent marker.

For December 2025, Somalia is forecasted with 1.000 probability of  $\geq 25$  fatalities (100th percentile) and 124.3 predicted fatalities (96th percentile). Risk category: Near-certain conflict; Intensity category: 101-1,000.
