## **Conflict Forecast: India**

**Target Month: December 2025** 

## Section 1

This figure shows the historical trend for December fatalities over the past 5 years, with our forecast for December 2025 highlighted. The other forecast months are shown for additional context. Global and cohort averages provide comparative context.

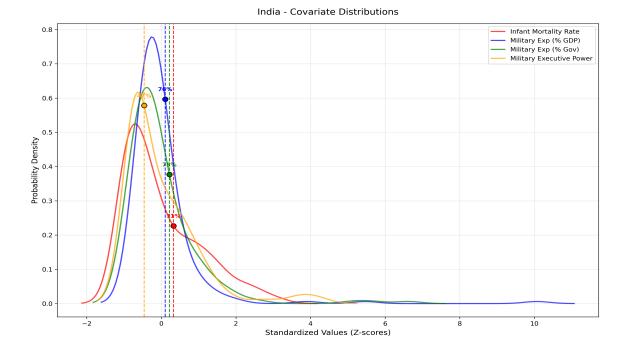

India - Monthly Fatalities Trend (Emphasis: December)

Our forecast for December 2025 (31 fatalities) is consistent with the 5-year historical average (28 fatalities).

## Section 2

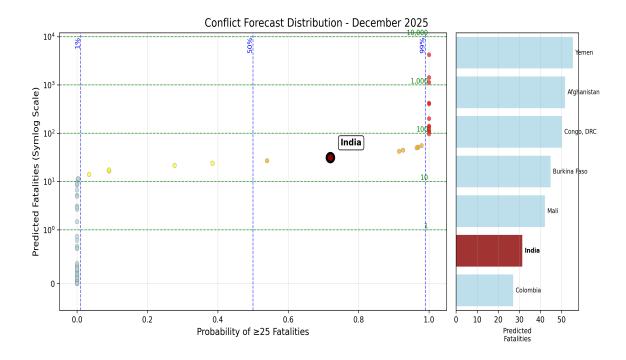

This figure shows where the target country sits within the global distribution for key covariates. Each colored curve represents the probability density of a covariate across all countries, with the target country's position marked by a vertical line.

Country profile: Infant Mortality Rate: high (71th percentile); Military Exp (% GDP): high (76th percentile); Military Exp (% Gov): high (75th percentile); Military Executive Power: moderate (47th percentile).

## Section 3

This figure shows the global distribution of conflict forecasts for December 2025, with countries positioned by their probability of experiencing ≥25 fatalities (x-axis) and predicted fatalities (y-axis, symlog scale). The target country is highlighted with a prominent marker.

For December 2025, India is forecasted with 0.720 probability of ≥25 fatalities (91th percentile) and 31.4 predicted fatalities (91th percentile). Risk category: Probable conflict; Intensity category: 11-100.
